Project Title: **Project Design Phase-I** : Strategic Product Placement Analysis Using Tableau

Define CS, fit into CC

1. CUSTOMER SEGMENT(S) CS

Retail store managers, marketing analysts, and business analysts working in retail companies who want to understand sales performance and product placement effectiveness. These users need insights to improve product visibility, optimize pricing strategies, and

6. CUSTOMER CONSTRAINTS CC

Customers may face constraints such as limited analytical tools, lack of technical expertise in data analysis, time limitations for analyzing data manually, and difficulty interpreting large datasets.

5. AVAILABLE SOLUTIONS AS

Currently, retail managers use spreadsheets, static reports, or manual analysis to understand sales performance. These tools provide limited insights and require a lot of time to analyze large datasets.

Explore AS, differentia

Focus on J&P, tap into BE, understand RC

2.JOBS-TO-BE-DONE / PROBLEMS (J&P)

Customers need to analyze retail sales data to understand how product placement, pricing strategies, promotions, and consumer segments influence product sales. They want to identify which product categories perform best, which display positions attract

9. PROBLEM ROOT CAUSE RC

The main reason this problem exists is the increasing complexity of retail sales data. Large datasets containing information about product categories, pricing, promotions, and consumer behaviour make it difficult to identify meaningful patterns without proper data visualization tools.

7. BEHAVIOUR BE

Customers usually analyze sales reports, review product placement in stores, monitor promotional campaigns, and compare product performance across categories to make decisions about marketing strategies.

Focus on J&P, tap into BE, understand RC

3. TRIGGERS (TR)

Customers start looking for solutions when sales performance decreases, when management requests better insights into sales trends, or when competitors perform better in the market. The need for data-driven decision-making and better visualization of sales data triggers them to adopt analytical tools.

10. YOUR SOLUTION SL

The proposed solution is to build an interactive Tableau dashboard that visualizes the relationship between product placement, pricing strategies, promotions, and sales performance. The dashboard will allow users to analyze sales trends, compare product categories, evaluate promotional impact, and identify the best product placement strategies to improve retail sales.

8. CHANNELS of BEHAVIOUR CH

8.1 **ONLINE**

Customers use data analytics tools, digital dashboards, business intelligence software, and online reports to monitor sales performance and analyze product data.

8.2 **OFFLINE**

Customers review printed sales reports, discuss strategies with team members, observe customer behaviour in stores, and evaluate product placement manually.

4. EMOTIONS: BEFORE / AFTER

EM

Before solving the problem:

Customers feel confused and uncertain because raw sales data is difficult to interpret and does not clearly show trends.

After solving the problem:

Customers feel confident and informed because visual dashboards help them understand sales patterns and make better business decisions.
