Project Design Phase-I
Proposed Solution Template

Project Name	Strategic Product Placement Analysis using Tableau
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Retail companies collect large volumes of sales data related to product categories, product placement positions, pricing strategies, promotions, and customer segments. However, analyzing this data and identifying patterns that influence sales performance is difficult using traditional analysis methods. Without proper visualization tools, managers cannot easily understand which product placement strategies improve sales.
2.	Idea / Solution description	The proposed solution is to develop an interactive Tableau dashboard that analyzes the relationship between product placement, pricing strategies, promotions, and sales performance. The dashboard will provide visual insights through charts, graphs, and filters that allow users to explore sales patterns and identify the most effective product placement strategies.
3.	Novelty / Uniqueness	The uniqueness of the proposed solution lies in its ability to combine multiple retail factors such as product placement, competitor pricing, promotions, and consumer behavior into a single interactive visualization dashboard. This allows decision-makers to analyze complex retail data easily and derive actionable insights.
4.	Social Impact / Customer Satisfaction	The solution helps retail businesses improve product placement strategies and increase sales performance. By understanding customer behavior and preferences through data visualization, businesses can provide better products, improve customer satisfaction, and enhance the overall shopping experience.
5.	Business Model (Revenue Model)	Retail companies can use this analytical dashboard to optimize marketing strategies and increase revenue through improved product placement and targeted promotions. The solution can also be offered as a data analytics service or integrated into retail business intelligence systems.

6.	Scalability of the Solution	The solution is scalable because the Tableau dashboard can analyze larger datasets from multiple retail stores or regions. Additional data sources and advanced analytics features can be integrated in the future to support more complex business analysis.
