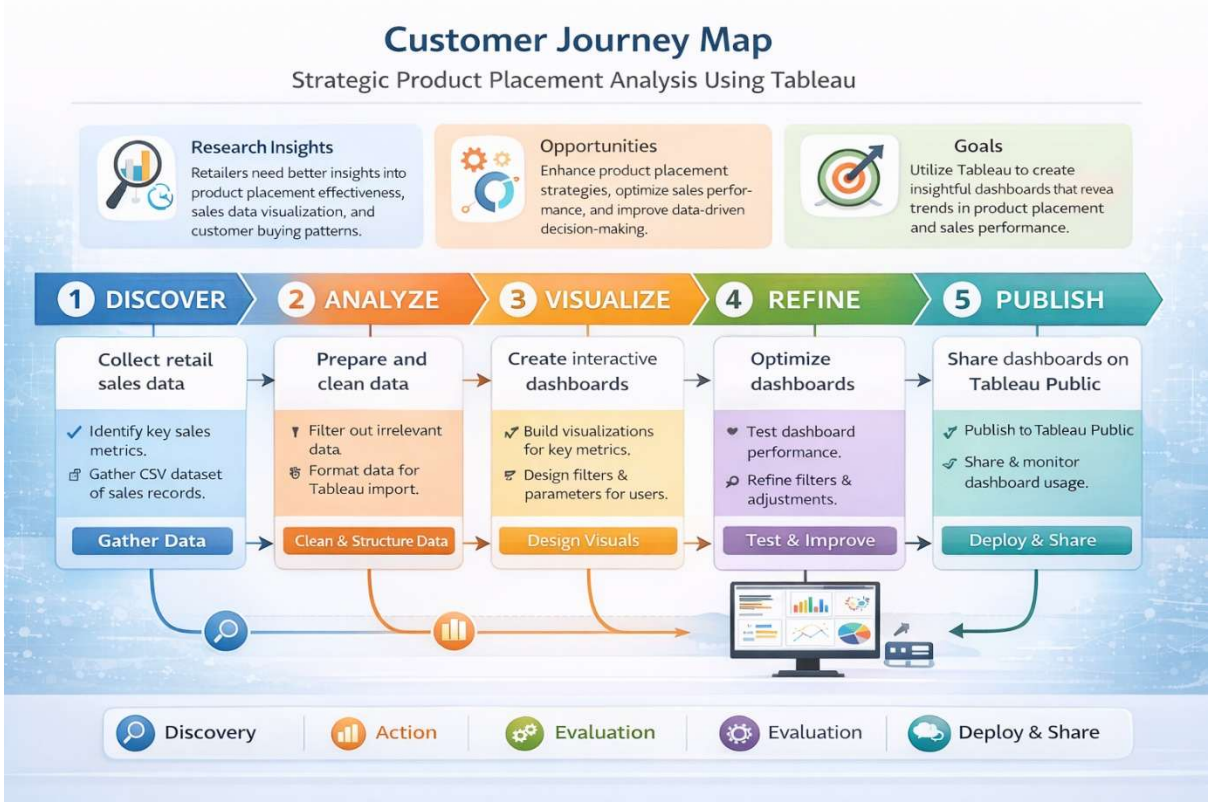
Requirement Analysis

Customer Journey Map	
Project Name	**Strategic Product Placement Analysis**



Journey Elements	Entice	Enter	Engage	Exit	Extend

Steps (What does the user experience?)	Retail manager discovers the need to analyze product placement and sales trends	User opens Tableau project and loads retail dataset	User explores dashboards and analyzes charts, filters, and product placement insights	User finishes analysis and exports insights or reports	User uses insights to improve retail strategies and future decision-making
Interactions (Tools, platforms, people)	Business discussions, analytics requirements gathering	Tableau Public interface, dataset import, data preprocessing	Dashboard filters, charts, parameters, visual analytics	Report sharing, presentation, screenshot exports	Decision-making meetings, strategy planning
Goals & Motivations	Understand how product placement affects sales	Load data correctly and prepare it for analysis	Identify patterns in sales performance and customer behavior	Communicate insights effectively to stakeholders	Improve future product placement and marketing strategies
Positive Moments	Excitement about discovering hidden sales insights	Successful data loading and clean dataset structure	Interactive dashboards reveal useful patterns	Clear visual insights help explain results	Better strategic planning using analytics
Negative Moments	Initial confusion about which metrics to analyze	Data formatting issues or missing values	Too many charts causing information overload	Difficulty explaining complex insights to non-technical users	Limited dataset preventing deeper predictions
Areas of Opportunity	Provide better guidance for choosing analytics metrics	Improve automated data cleaning processes	Design simpler dashboards with clear highlights	Create automated report generation	Integrate AI-based predictive analytics
